

Cal OES Daily Situation Report

November 8, 2016

The San Mateo Bridge crossing San Francisco Bay, links the San Francisco Peninsula with the East Bay. It is the longest bridge in California and the 25th longest in the world. High-voltage power lines built by PG&E in the 1950s parallel the bridge all the way across the bay providing power to the peninsula and San Francisco.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

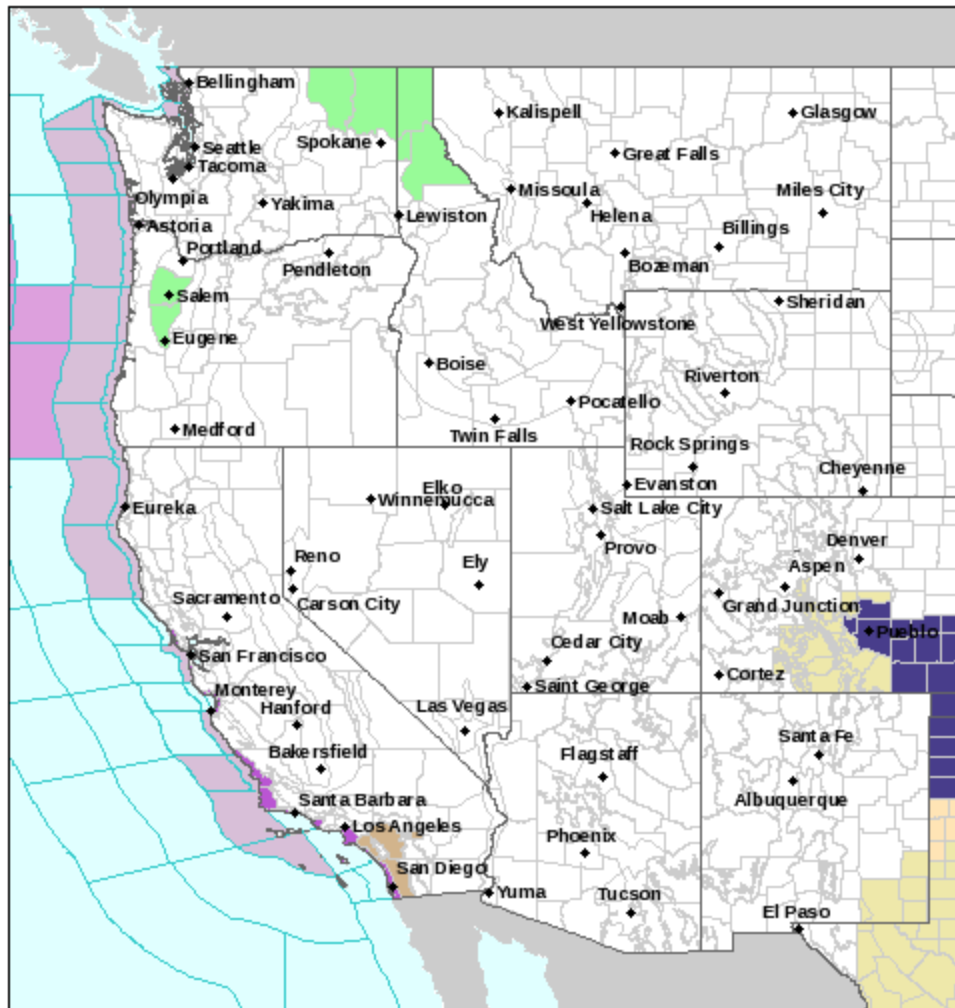

A somewhat unsettled weather pattern will continue over the next 7 days with a few rather weak weather systems moving through the region. Conditions will generally be without precipitation or with just light precipitation overall. One system will affect the far northwest corner of the Geographic Area tonight into early Wednesday with a bit of light precipitation. Another system will arrive Friday with light precipitation, mainly for the mountains. Sunday into Monday another weather system is expected with more widespread light precipitation, but still mainly for the northern areas. Otherwise skies will be mostly sunny over the next few days, and there will generally be variable amounts of cloudiness after that. Wednesday and Thursday will be the warmest days this week with a little above normal temperatures in a lot of areas. The warmest inland areas will mostly be 70-75. In spite of all the weather systems coming in, no strong winds are expected.

SOUTHERN CALIFORNIA

Surface pressure gradients flipped offshore late last night which has resulted in local east and northeast winds early this morning. The strongest winds early this morning are occurring over San Diego County where some gusts to 20 mph are being reported. The pressure gradients will be more of an east to west wind orientation the next few days and the strongest winds will generally favor areas south and east of Los Angeles County. Areas such as the Banning Pass, Santa Ana Canyon as well as other areas of western Riverside, Orange, and San Diego County will see most of the offshore winds through Thursday. Winds in these areas will generally be in the 10-20 mph range today, but will likely increase into the 15-25 mph with gusts 40 mph tonight into Wednesday morning. With a small area of high pressure overhead, expect temperatures to jump 8-12 degrees today over Southern California with highs back in the 90s in the valleys and lower foothills each day through Thursday. Minimum relative humidity (RH) may fall into the 10-15% range with poor recovery at night. Elsewhere, expect night through morning low clouds and fog to return to the San Joaquin Valley through the end of the week. A weak trough to the north of the region should bring a slow cooling trend into the weekend. No precipitation is expected until possibly the second half of next week.
